Non Custodial Arbitrage BOT

DIGITALBLIZ.COM

Who We Are

DigitalBliz

DigitalBliz LTD is a FinTech company founded in London on March 2018.

The Group provides FinTech products and services through the London Headquarters and its two subsidiaries: DigitalBliz Technologies LTD, a Dubai based and DIFC regulated company, and DigitalBliz Switzerland, the Swiss branch of DigitalBliz London.

The aim of DigitalBliz LTD is to provide the most reliable updated tool set dedicated to specialists in Crypto-Assets: **DigitalBliz 4Trade**, a totally automated arbitrage trading bot, **DigitalBliz Deep4**, a deep Crypto-Exchanges Explorer, and the mobile App **Deep4C**.

Why UK

- Core Market for Finance and Fin-Tech Corporations
- Core Market for Fund Rising
- Common Law and English language backed

Why Switzerland

- Safe and Secure environment
- Long tradition for Banking and Financial Service providers
- Leading hub for Crypto Currency and the for the growing Security and Utility Token markets
- Here is where all coders and CTO are sitting and where the program is made and implemented

Why Dubai

- UAE represents the most advanced Country in the world in the sector of Blockchain based appliances and features.
- DIFC is one of the most recognized Financial Authority in the World
- UAE is a Tax Free Country

4Trade is the perfect tool
for crypto arbitrage

"Over 60% of the total Bitcoin (BTC) in circulation has not left its wallet in more than a year, highlighting the demand among investors for Crypto Tools to activate dormant assets".

cointelegraph.com

Non Custodial!

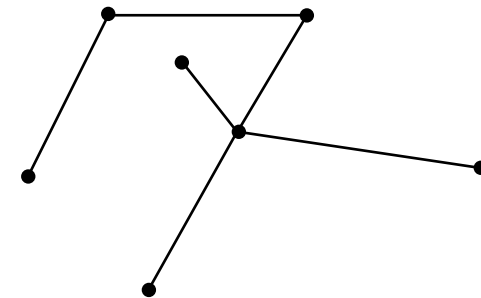

Crypto Arbitrage

DigitalBliz

- Arbitrage is the process of taking advantage of inefficiencies in markets. In the case of cryptocurrencies, this can occur as the price of assets fluctuates over time. If there is a difference between the price of an asset across exchanges (or even potentially within the same exchange), it may be possible to buy and sell the same asset in a way which will result in a net profit.
- The arbitrage opportunity for any market is calculated by identifying the overlap between the highest bid prices and the lowest ask prices. When the bid price on one exchange is higher than the ask price on another exchange for a cryptocurrency, this is an arbitrage opportunity.

We make your dormant assets productive

DigitalBliz

4Trade is an automatic **Bot Platform** powered by precise and freshly harvested data, gathered from the selected Exchanges and updated every second.

The data, processed by a proprietary algorithm, automatically highlights the most convenient Exchange to buy and sell the selected coin. Once the Bot is activated with the desired features (coin bases, minimum spread, coins and exchanges white-list), it goes live performing a non-stop 24/7 **Crypto-Arbitrage**.

4Trade is continuously processing thousands of market pairs, 24/7

Non Custodial!

4Trade how does it work

DigitalBliz

4 Easy Steps to get up and running

1 Connect Your Exchanges

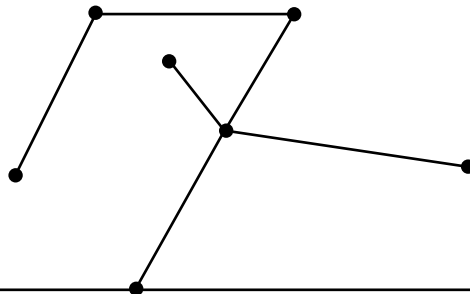

Plug in your Exchanges by entering your API, through an encrypted slot in AWS Secret Manager. No one in DigitalBliz can reach, in any way, your wallets or your confidential informations (Secret Key, password and other codes).

2 Select the Preferred Strategy

You can make your own strategy and asset allocation: BOT, Coins, Fiat, Exchanges, Minimum net Spread, Amounts per Trade and much more.

3 Don't change your daily activities

DigitalBliz 4Trade works in background, using sleeping bulks. You can keep on trading in the traditional way, free at any point to withdraw, deposit, trade, or temporarily pause the BOT.

4Trade is using two different automatic BOT:

Oscillator

Performs instant buying and selling of the same coin on two different exchanges.

Triangulator

Works on multiple assets pairs, generating profit from the subsequent trading on several pairs (example: from EUR, to BTC, to ETH and back to EUR)

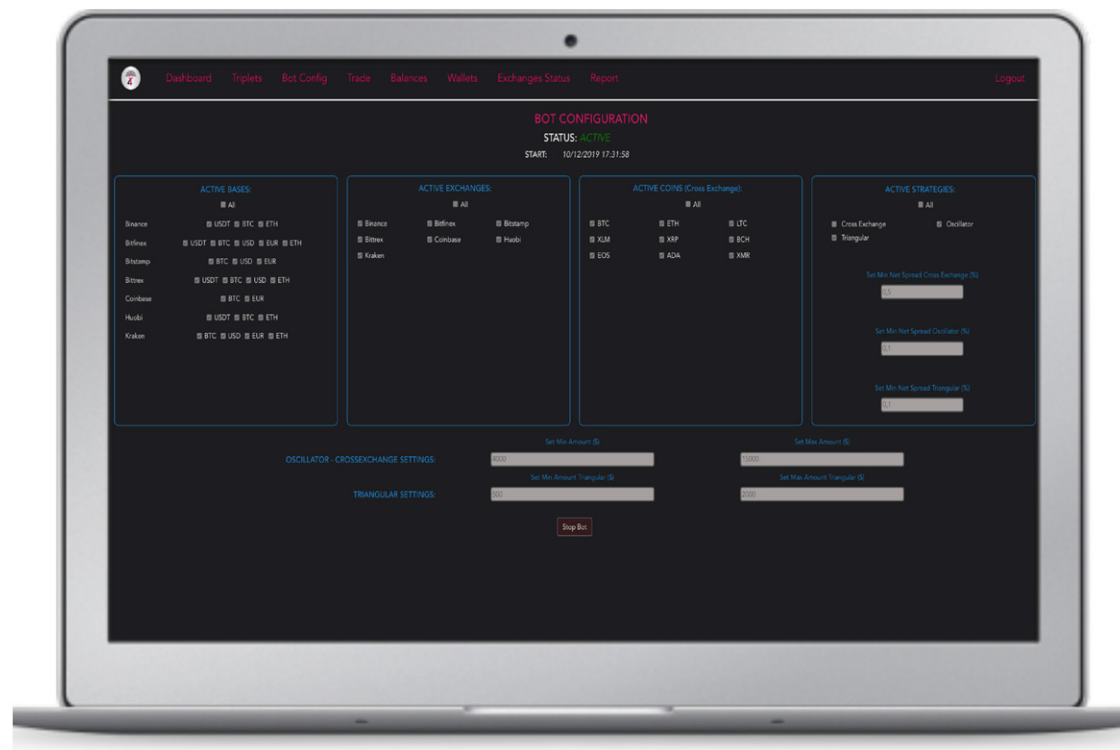

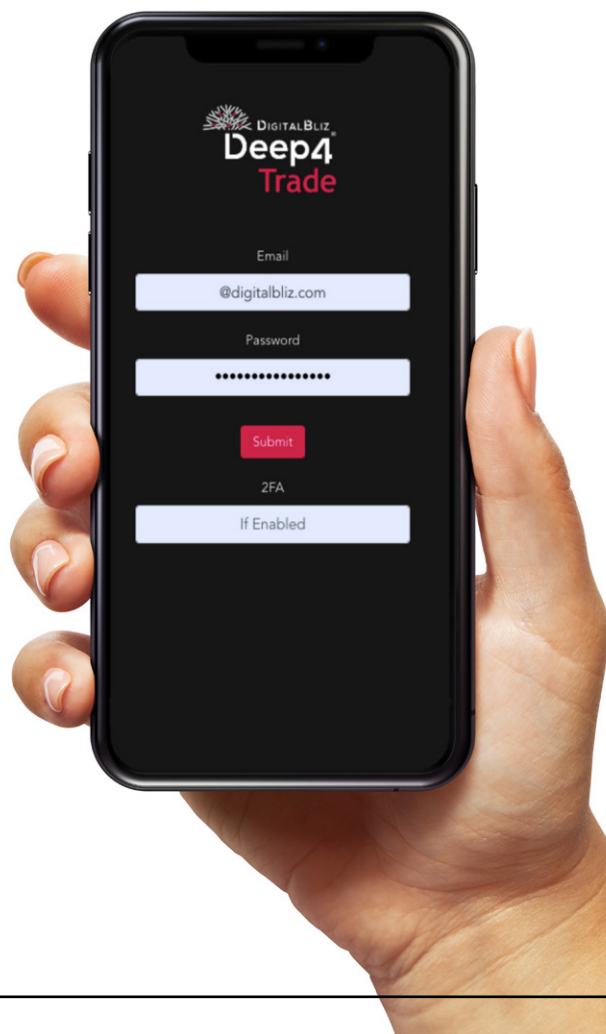

Exclusive and intuitive platform

DigitalBliz

Through a 2FA security log-in page you can gain access to an exclusive and private User Dashboard.

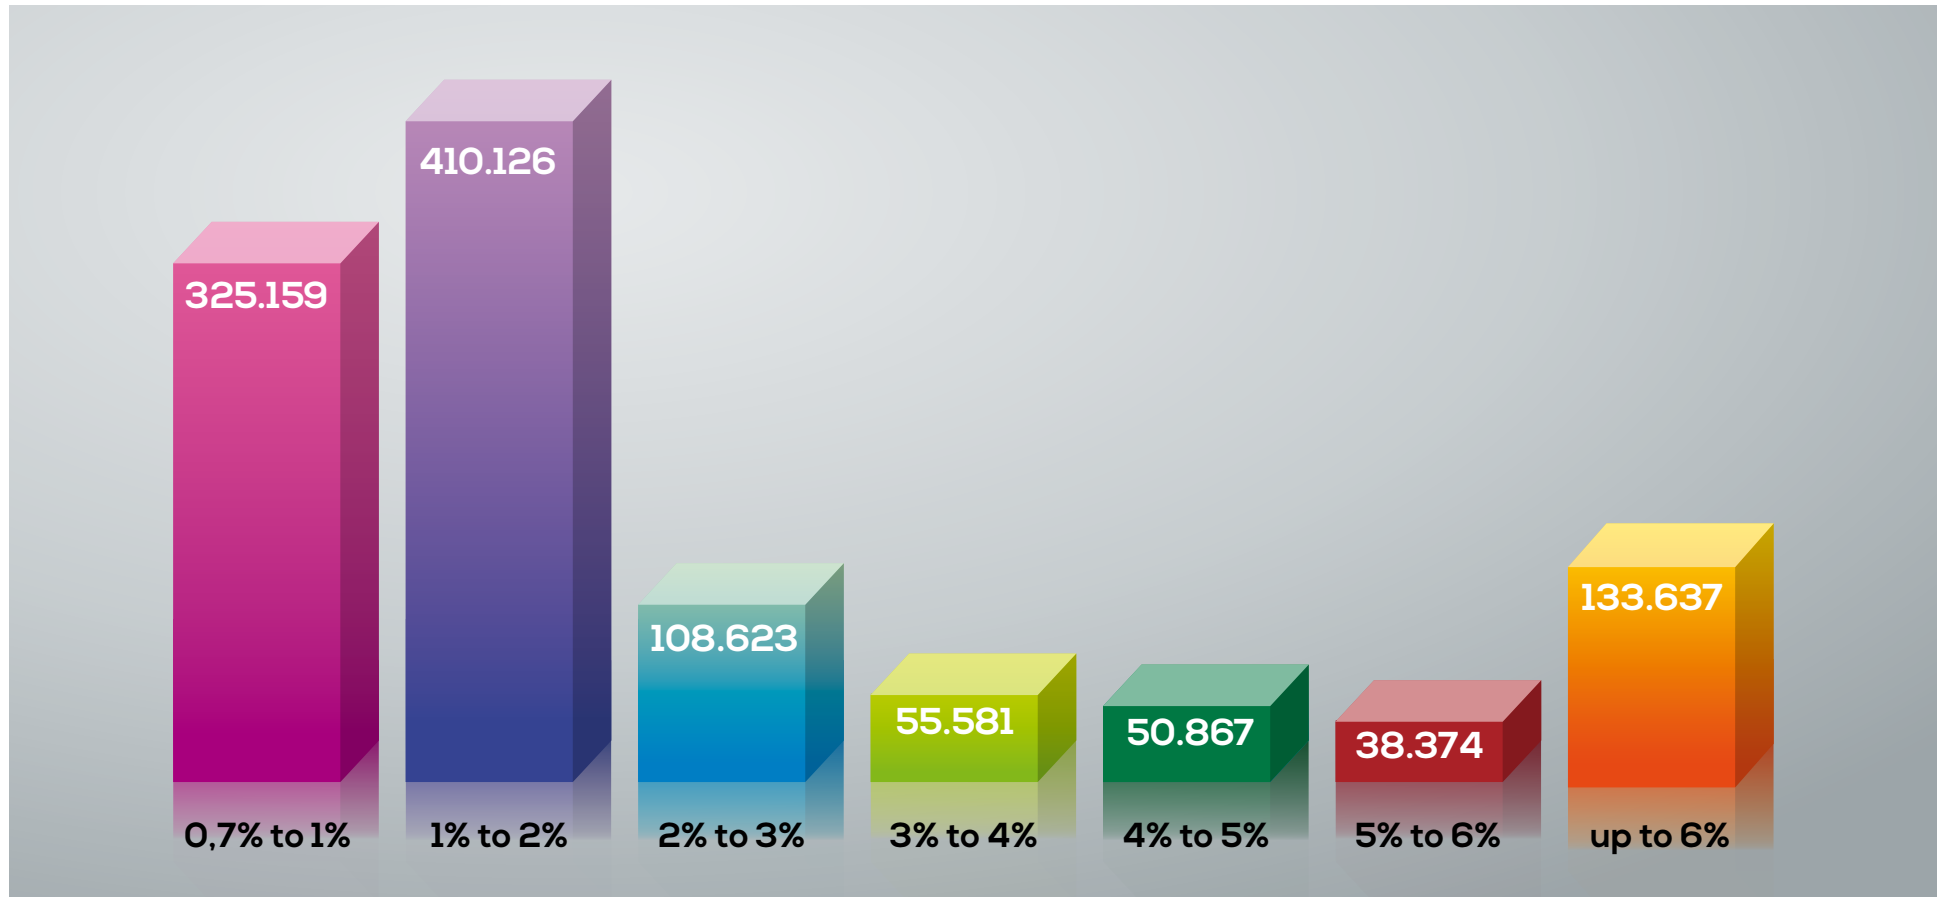

Connect in total safety your Crypto Wallets to start Automated Arbitrage.

You can bespoke your strategy and change it as you wish.

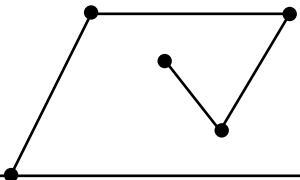

Is arbitrage profitable?

Number of Opportunities by AVG % NET SPREAD in 60 days.

Official performance test

DigitalBliz

We performed an official test to certify the potential of 4Trade.

The test has been supervised and certified by an external Crypto equity fund, fully authorized in Europe, ConsulCoin SA.

- Test length: 8 weeks
- Both tools involved: Oscillator and Triangulator
- Base: EUR, USDT BTC, ETH
- Coins: LTC, EOS, XMR, XRP, XLM, BCH, ADA
- 4 different market strategies tested

ConsulCoin
